

How your Radio Works: Fair Base Radio

P0: Scan ON/OFF

P1: Go to SAR TAC Channel

P2: EMERGENCY

P3: Zone

To start or stop Scan use the **P0** button. *This will scan SARTAC, 670, SWAT, HotSprings, Neon and Blue. If one of these becomes annoying or distracting you can temporarily remove it from the scan list by pressing the **P0** Scan button for 1 second while it is stuck on that channel. Once you turn the radio off then back on it will put the deleted channels in the scan list.*

If you need to go to the SAR-TAC channel you can press **P1** any time. *This even works when scanning. It will stop the scan though, so make sure the radio is back on scan when you are done with the conversation.*

To send pager tones and get everyone's attention, press the **P2** button when you are on SAR TAC. *You will hear the radio send two tones. You can key the mic any time during or immediately after the tones, but make sure you wait at least 3 seconds after the tones to say your message.*

Don't worry about changing Zones for the fair. The radio will be on the "Fair Zone" for the duration of the fair.
